SEAWARDS

Seawater desalination

Seawards responds to hydric stress all over the world, by developing an unique breakthrough technology, cryo-separation, to desalinate seawater with a full respect of Ocean's ecosystem. Indeed, Seawards is the only one technology to preserve fauna and marina's because there is no use of chemical products (no discharge of chemical brine). Seawards' technology, on top of an environmental's respect, has a competitive production cost with agile and flexible infrastructures.
